Use of Tide Tables

- | OCTOBER | | | | | | | | |
|--|------|------|------|------|------|-----|------|-----|
| | Time | m | | Time | m | | | |
| • The Hydrographic Office of the Admiralty publishes Tide Tables annually. | 1 | 0350 | 1.1 | 16 | 0353 | 0.6 | | |
| | | 1046 | 4.5 | | 1041 | 5.0 | | |
| | | 1608 | 1.1 | | 1614 | 0.7 | | |
| • The tables give the time and height of high and low water at "Standard Ports" around the coast, for every day of the year. | M | 2252 | 4.4 | TU | 2256 | 4.9 | | |
| | | 2 | 0425 | | 0.9 | 17 | 0436 | 0.5 |
| | | | 1116 | | 4.6 | | 1125 | 5.1 |
| • UK examples
Plymouth(Devonport),
Portsmouth, Dover. | TU | 1642 | 1.0 | W | 1657 | 0.5 | | |
| | | 2323 | 4.5 | | 2341 | 5.0 | | |
- Training Almanac see page1

5

Tide Tables

- Tide tables give the **times** and **heights** of HW and LW
- **Heights are given in meters above Chart Datum**
- Range HW to LW
 - peak ranges at Springs, least range at Neaps
- **Times are given in the time zone (standard time) appropriate to the location**
 - Earth Rotates at 15 deg/hr which gives approx time zone
 - UT (GMT) for UK (add one hr for summer time)
 - UT+1 for France (add one hour for DST)

6

Time Zones

- Tide tables are given in local time (standard time)

For our exercises:

- Northern Territories are on standard time (UT) and , in Summer, UT + 1 hr (DST)
- Southern Peninsula is on Time Zone -0100 (SPST) and Summer Time +1 hr (SPDST)

7

Tide Tables – Training Almanac

Use To find Time and Depths of tides

- Victoria –**
- H W (pm) 3 February
- LW 22 April
- Range 21 February (pm)
- Range 1 March (pm)
- Namley Harbour – use local time**
- HW (am) 1 November
- LW (am) 14 October

Tide Tables

Victoria –

H W (pm) 3 February 1423 UT 5.5m

LW 22 April 1212 UT 1.6m

Range 21 February (pm) 2.3m

Range 1 March (pm) 6.2m

Namley Harbour – use local time

HW (am) 1 November 0803 UT 3.4m

LW (am) 14 October 1236 DST(_{1136 UT}) 1.1m

11

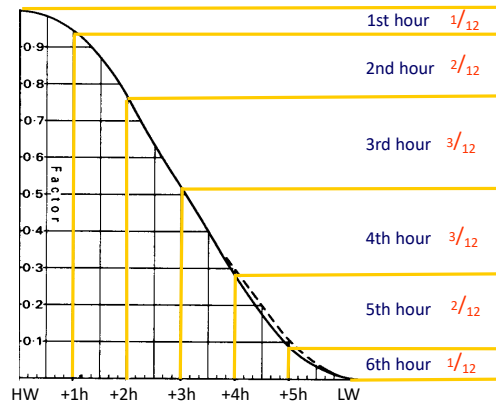

TIDAL HEIGHT CALCULATIONS

- Finding the height of tide at a certain time – for anchoring or to find when the boat will refloat having run aground.
- Finding the time at which the tide will reach a certain height - to find when sufficient depth to clear, for example, sill of a marina, bar, sand bank, rock etc.

12

RULE OF TWELFTHS

Often using the tidal curve the range of the tide may be divided into twelfths for a quick estimation of the height of tide.

13

RULE OF TWELFTHS

14

15

16

HOW TO FIND THE HEIGHT OF THE TIDE USING THE CURVE

QUESTION HW Victoria on the afternoon of 22nd March

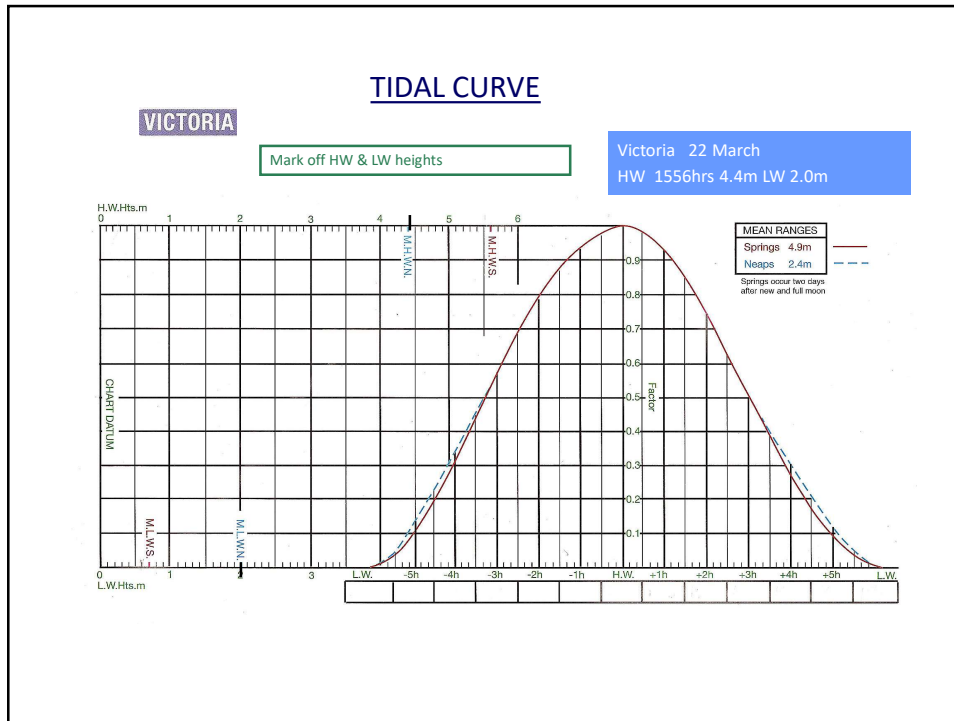

WHAT TO DO

1. Find the time & height of the HW closest to the afternoon.
Answer: HW 1556 UT 4.4m (in the shaded area – no hour added)
2. What is the height of the preceding LW?
Answer: 2.0m
3. What is the range?
Answer: Range 2.4m
4. Is it Springs or Neaps?
Answer: (very almost) Neaps

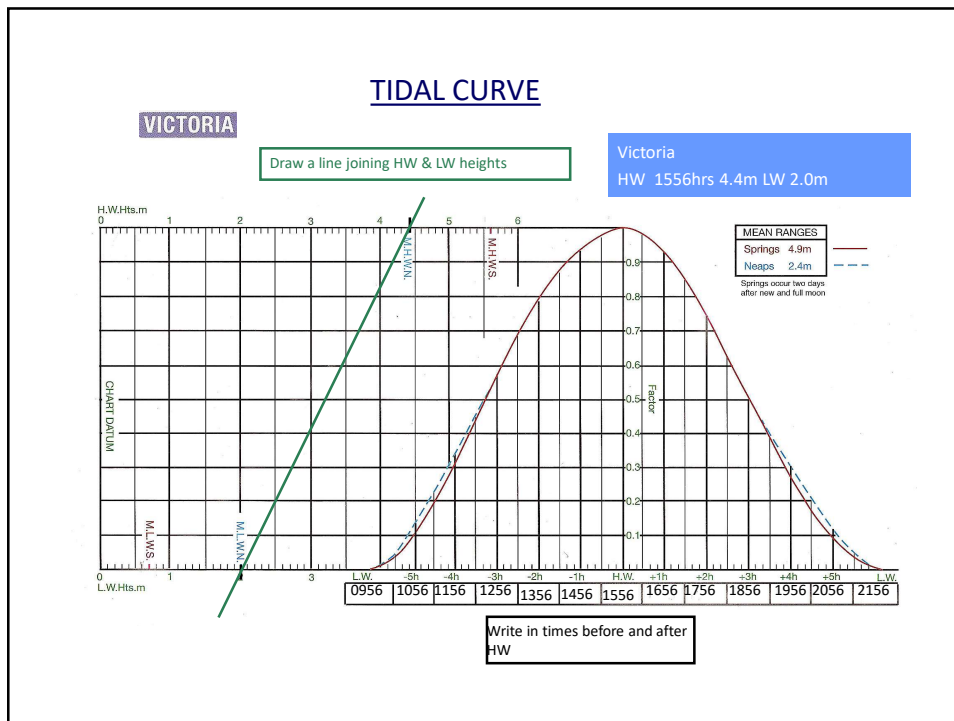

17

18

19

20

HOW TO FIND THE HEIGHT OF THE TIDE USING THE CURVE

QUESTION What is the height of tide at Victoria 2 hours before HW on the afternoon of 22nd March

WHAT TO DO

1. Find the time & height of the HW closest to the afternoon.
Answer: HW 1556 UT 4.4m (in the shaded area – no hour added)
2. What is the height of the preceding LW?
Answer: 2.0m
3. What is the range?
Answer: Range 2.4m
4. Is it Springs or Neaps?
Answer: Neaps

Now go to the curve and use this information

21

22

23

24

25

26

Exercises

27

TIDAL CURVE

Task: At what time during the afternoon of 3 January will the tide fall to 2.5m

3 January Victoria HW 1301 UT 5.7m LW 0.8m Range 4.9m Springs

28

TIDAL CURVE

Task: At what time during the afternoon of 3 January will the tide fall to 2.5m

3 January Victoria HW 1301 UT 5.7m LW 0.8m Range 4.9m Springs

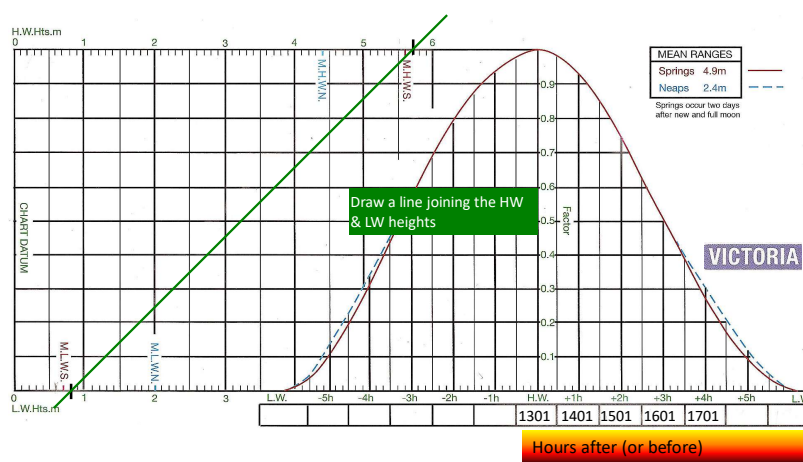

29

TIDAL CURVE

Task: At what time during the afternoon of 3 January will the tide fall to 2.5m

3 January Victoria HW 1301 UT 5.7m LW 0.8m Range 4.9m Springs

30

31

32

Tidal Height

- Finding the **height** of tide at a certain time - anchoring or when the boat will refloat!
- **Time** tide will reach a certain height – to allow crossing a sill of a marina or a sand bank etc.
 - Time and height of Standard Port for the HW and LW each side of time of interest
 - Use range to decide use of Spring or Neap curve
 - Tidal height curve to find height at known time - or
 - Use tidal height curve to find time for a known height

AXE YACHT CLUB

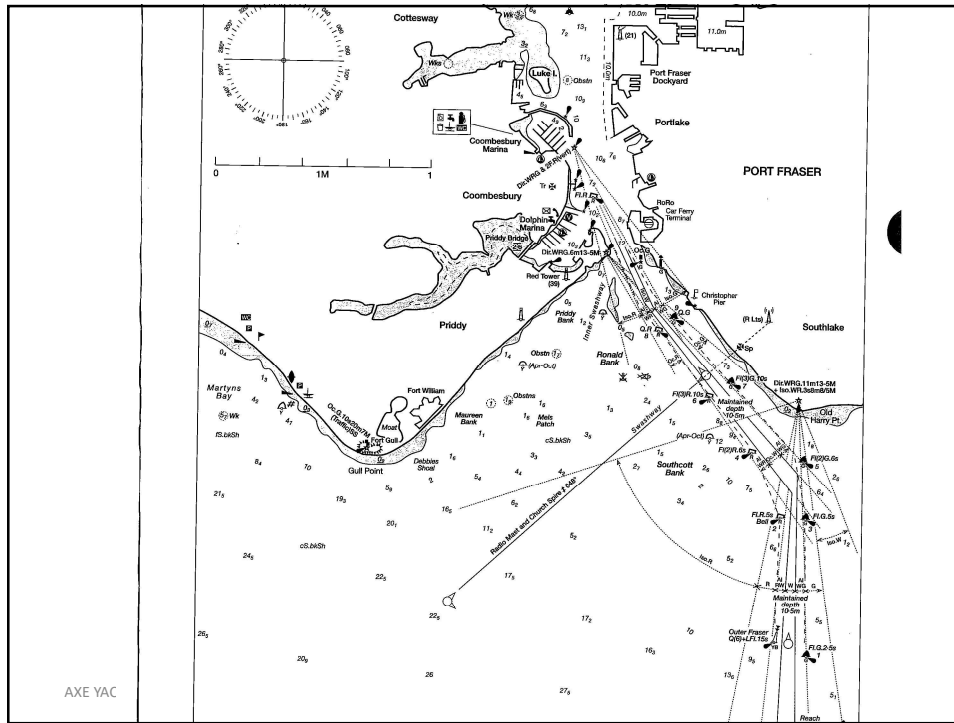

33

A yacht which draws 1.5 metres intends to anchor off Fort William (Port Fraser) at 1500 local on Thursday 25th July

1. What is the height of tide at 1500
2. What depth does the yacht need to anchor in in order to have 1m clearance beneath the keel at low water that evening?

AXE YACHT CLUB

34

AXE YAC

41

42

A yacht which draws 1.5 metres intends to anchor off Fort William (Port Fraser) at 1500 local on Thursday 25th July

1. What is the height of tide at 1500?

From tide tables

HW 1324 4.0m

LW 1941 0.5m

Range = 3.5m therefore use springs curve

1500 is 1 hour 36 mins after HW

From tidal curve Height of tide = 3.3m

AXE YACHT CLUB

43

A yacht which draws 1.5 metres intends to anchor off Fort William (Port Fraser) at 1500 local on Thursday 25th July

What depth does the yacht need to anchor in in order to have 1m clearance beneath the keel at Low Water that evening?

From tide tables

HW 1324 4.0m

LW 1941 0.5m

Range = 3.5m therefore use springs curve

1500 is 1hr 36 mins after HW

From tidal curve height of tide at 1500 = 3.3m

44

A yacht which draws 1.5 metres intends to anchor off Fort William (Port Fraser) at 1500 local on Thursday 25th July

What depth does the yacht need to anchor in in order to have 1m clearance beneath the keel at Low Water that evening?

From tide tables

HW 1324 4.0m
 LW 1941 0.5m
 Range = 3.5m therefore use springs curve
 1500 is 1hr 36 mins after HW

From tidal curve height of tide at 1500 = 3.3m

Tide will fall another $(3.3\text{m} - 0.5\text{m}) = 2.8\text{m}$ until low water

Tide Fall 2.8

Draught 1.5

Clearance 1.0

= 5.3m depth of water to anchor in at 1500

AXE YACHT CLUB

45

What is the latest time that the yacht can enter Portlake (Port Fraser) and have 2 metres clearance under the keel?

Charted depth in entrance channel 2.1 metres

1.5m (draught)
 + 2.0 m (required clearance)
 - 2.1m (charted depth)

= 1.4 metres which is the height of tide needed

AXE YACHT CLUB

46

47

48

49

50

What is the latest time that the yacht can enter Portlake (Port Fraser) and have 2 metres clearance under the keel

Charted depth in entrance (Chart 4 , D) 2.1 metres

1.5m (draught)
 + 2.0 m (required clearance)
 - 2.1m (charted depth)

= 1.4 metres which is the height of tide needed

ENTER No later than HW+ 3hrs 50min = 1714 local

AXE YACHT CLUB

51

LOW WATER CURVES

SOME PORTS USE THE LOW WATER AS THE REFERENCE POINT.

This is because the HW time is difficult to calculate accurately

DUNBARTON Mean Spring and Neap Curves

Training Almanac p 43

Use of Tide Tables

- The Hydrographic Office of the Admiralty publishes Tide Tables annually.
- The tables give the time and height of high and low water at “Standard Ports” around the coast, for every day of the year.
- The tables also give “differences” for other ports, which are termed “Secondary Ports”.
- Very often it is possible to purchase “Local Tide Tables” which have already had the “differences” applied.
